[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

Full-Stack AI Engineer with a "builder mindset" and hands-on experience architecting scalable applications using **React.js, and Python**. Proven ability to integrate complex **Generative AI** and **Agentic workflows** into production-ready web interfaces. Passionate about building high-velocity products and taking ownership of the full Software Development Life Cycle (SDLC), from frontend design to deployment

Technical Skills

Languages: Python, SQL, HTML, CSS, JavaScript

Frameworks: RAG, MCP, FastAPI, Node.js, Hugging Face (Transformers), React+Vite, LangChain, CrewAI, LlamaIndex, NextJs

Tools: Google Cloud Platform, AWS, Docker, Git, GitHub, Firebase, Supabase, Redis, Vercel, Cursor, AntiGravity, CLI agents

Expertise: LLMops, Prompt Engineering, Machine Learning, Chrome Extensions, Local LLM's

Professional Experience

SmartBridge

Oct 2024 - Mar 2025

Data Analytics Intern

- Led a team of four in an end-to-end data analytics project, managing the entire lifecycle from data collection and cleaning to final analysis and visualization, demonstrating adaptability and problem-solving skills relevant to AI/ML pipeline development.
- Delivered the team's primary project, the 'Global Malnutrition Trends' Power BI dashboard, showcasing actionable insights and improving data-driven decision-making, aligning with the need for effective model evaluation and data-driven improvements in AI.
- Enhanced data visualization and storytelling capabilities, driving impactful decision-making through analytics, highlighting skills applicable to various technologies and contributing to clear communication of AI agent performance.

Projects

Our Kandukur - Live Community Portal [\[GitHub\]](#) | [\[Live Link\]](#)

- Sole-engineered a full-stack community portal from concept to launch, independently managing all aspects of the SDLC including coding, hosting, SEO, and domain implementation, displaying comprehensive development skills.
- Integrated Google's Gemini API for AI-driven content features and utilized Firebase for backend services, including database and user analytics, demonstrating proficiency in AI integration and backend management.
- Optimized user experience and performance, ensuring seamless navigation and functionality for community engagement, showcasing user-centric design and optimization skills.

Multi-Agent RAG System for Code Analysis - CodeGrapher AI [\[GitHub\]](#)

- Developed a full-stack AI code analysis agent using a Flask backend, React frontend, and a Redis queue for asynchronous indexing of multiple Git repositories, demonstrating skills in Python, and full-stack development.
- Architected an intelligent query router that directs prompts to a high-accuracy RAG pipeline (ChromaDB) or a generative ReAct agent equipped with custom tools for automated test generation, code refactoring, and bug-fixing via an AST-based code graph, showcasing abilities in AI architecture and tool creation.
- Enhanced code analysis efficiency by implementing advanced AI-driven workflows, reducing manual intervention and improving accuracy, reflecting strong problem-solving and analytical skills.

AI Web Assistant [\[GitHub\]](#)

- Architected an autonomous AI agent that executes complex web tasks by analyzing screenshots with Google Gemini Vision, demonstrating proficiency in AI and problem-solving.
- Engineered a 'cognitive cycle' backend using Python and Selenium, showcasing skills in Python, agentic workflows, and backend architecture.
- Improved task automation efficiency by leveraging AI-driven decision-making and robust backend architecture, highlighting the ability to adapt to various technologies.

Education

Godlavalleru Engineering College, Godlavalleru, AP

Aug 2021 - May 2025

Bachelor of Technology, Internet of Things - 8.24 CGPA
